Our Ref: 9153/14 Kalpataru/Isang-Rakola 220kV

Date: 13 November 2017

Attention: Mr. Samir Mahadhik, Country Manager

Dear Sir,

**CONTRACT FOR ISANG – RAKOLA, 220kV TRANSMISSION LINES, BOTSWANA  
POWER CORPORATION - KALPATARU POWER TRANSMISSION LIMITED  
LETTER OF ACKNOWLEDGEMENT**

In our capacity as engineering and management consultant for the 220kV transmission line project Isang – Rakola in Botswana, owned by Botswana Power Corporation, we confirm that Kalpataru has implemented, and recently completed, the project to good technical standard and within budget.

The project scope included 160 km of new 220kv lines with twin conductors per phase built mainly on guyed V-towers and partly on self-supporting towers. Kalpataru executed the tower design and manufacture in-house and provided all materials supply and installation works on a turn-key basis. All supplies were on site in time.

The project also included rearrangement of several older transmission lines to establish in/out connections to the new Rakola Substation. Kalpataru demonstrated that they have the competence and experience to carry out such work, which requires planning and skills both to minimise line outage times and to minimise the related risks.

Yours faithfully,  
Norconsult (Africa) (Pty) Ltd

**Oystein Loland**  
Projects & Technical Director
